Ageing: 12 months in 100% semi-new French oak barrels.

Ageing time: 12 months in barrels.

Stabilization: Completely natural methods.

Clarification: With egg albumin.

Alcohol: 13,5% Vol.

TASTING NOTES

Colour: Medium layer with a bright red background and a light red rim.

Nose: The nose is very intense, full of fresh fruit that overflows the glass. Red fruits, raspberries, strawberries and cherries that are mixed with each other. A very light, very subtle note of oak appears in the background and allows us to appreciate the prominence of the fruit more clearly. In addition to the fruit, there is complexity and mineral and slightly spicy notes appear. It has a spark of gunpowder and Sichuan pepper that fill it with joy.

Palate: Medium and continuous volume, without troughs. It is very fresh and the tannin is fine. Red fruits fill the palate and stay for a long time. It is very long and pleasant. A delicious wine to enjoy now and for years to come.

It admits the cold temperature, like a white one, it emphasizes the fruit and the freshness. It goes very well at the entrance of the meal and adapts perfectly to the fish.

It is ideal as wine by glasses to take it with pinchos or tapas.

VINTAGE, CLIMATIC CYCLE

The meteorological vintage began with a very dry autumn and the reservoirs practically empty. December gave a change with rains and for “Reyes” (January 6th) it rained and snowed causing a circulatory chaos in some roads. Winter ends being very cold and with swamps to overflowing.

Sprouting arrives somewhat delayed and with more than 280 mm. of rainfall since January.

Spring was very cold and rainy.

Flowering was late, the most delayed in recent years.

July came with heavy storms and hailstorms. On the 8th the hail affected a good part of our vineyards in Villalba, Briñas, Haro and Gimileo.

Mildew attacks developed mainly in Rioja Media and Alavesa.

August was dry with some hot spots and cool nights. The veraison was also late.

Cluster mildew appeared, especially on faces affected by hail. The floors were very wet, and it was difficult treating them.

Wood diseases appeared more virulent than usual.

It was a year of abundant harvest in the D.O. although it was not the case of the RODA vineyards that had lost part of their production due to hail in July.

In September there were storms with rains that caused botrytis. Stunning pictures of Logroño flooded during the festivity of San Mateo.

At the end of September, the temperatures were very high. The harvest was also late. It began in the last days of September and ended on October 23rd.

668 mm. were collected during the vegetative cycle, making the 2018 vintage the second rainiest in the history of Roda, after 1992. It has been one of the most complicated years meteorologically.
